Junior Secondary School Academic Block

Past Capital Campaign Projects

I. A Foundation of Faith and Friendship

From the beginning, our partnerships have never been only about infrastructure or resources. They have been about a shared covenant rooted in faith, love and relationship. Over time, our donors have become far more than supporters - they have become a **global family**.

- **The Heartbeat:** Continuous prayer and mutual encouragement.
- **The Outcome:** Because of these partnerships, we are seeing a generation of children in Dandora rise from extreme poverty to become leaders - strengthened by the knowledge that a family thousands of miles away believes in them.

II. Proven Impact: The Milestone Map

Our donors have been the backbone of our physical and spiritual growth. Through their generosity, past investments have helped create a self-sustaining ecosystem of education, health and opportunity.

Year	Project	Investment	Outcome & Impact
2019	Secondary School Well	Critical need supported through a well drilling organization	Provided the first reliable source of clean water for the entire campus.
2020	Reverse Osmosis System	\$21,500	Eliminated waterborne illnesses, ensuring students stay in the classroom, not the clinic.
2023	The School Bus	\$80,000	Provided safe, secure and reliable passage for students and expanded our reach into the furthest corners of the community.
2024	Primary School Sanitation Block	\$44,500	Restored dignity and hygiene for our youngest learners, meeting essential health standards.

Current Capital Campaign Project

I. Building a Bridge to the Future

To meet Kenya's new educational mandates and build a bridge to the future, we are constructing the **Junior Secondary School (JSS) Academic Block**.

The new block is a requirement for the school to be compliant with the Government of Kenya (GoK) and Ministry of Education (MoE).

Beyond supporting the strategic goal of doubling enrollment, this building is essential for providing adequate learning facilities and meeting government education requirements. It will also include administrative space necessary to support the school's continued growth and operations.

The building will be powered by solar renewable energy, ensuring uninterrupted learning while significantly reducing long-term electricity costs.

Project Budget Overview:

Total Project Cost: \$702,000

Funds Secured to Date: \$325,000

(Includes \$200K and \$75K from two family foundations and \$50K of contributions from our Board Members)

The Gap: \$377,000

II. Responsible Growth

Our goal is to break ground in December 2026. To move forward responsibly, we must first reach **70% of the project funding - \$491,400.**

This means we are **seeking the final \$166,400** needed to unlock the first phase of construction.

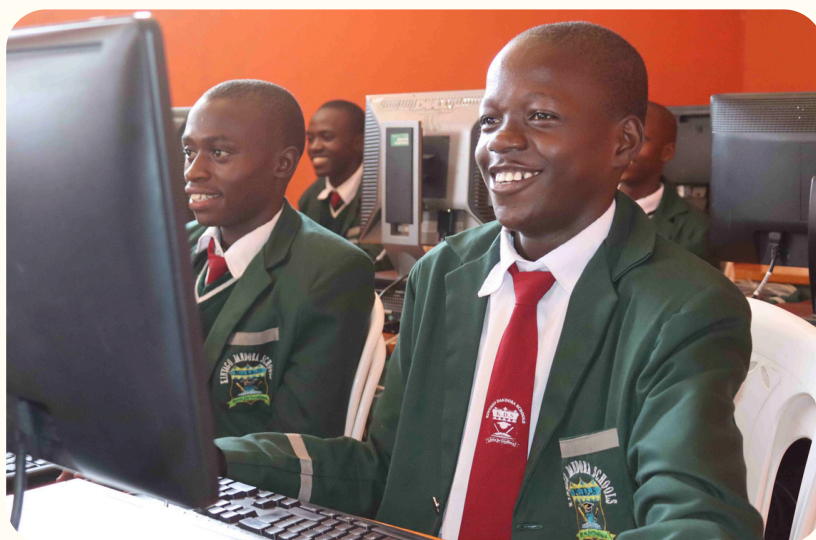

To steward resources wisely, we have made the strategic decision to postpone groundbreaking until this threshold is reached. This ensures that once construction begins, we have the momentum and resources needed to complete a fully functional building rather than an unfinished shell.

Investment Breakdown for Completion:

- **Junior Secondary School Main Block:** \$640,000
- **Student Desks (500 units):** \$20,000
- **Computer Lab (50 computers):** \$12,000
- **Science Labs (Chemicals/Furniture):** \$20,000
- **Library Resources:** \$10,000

III. A Lasting Legacy

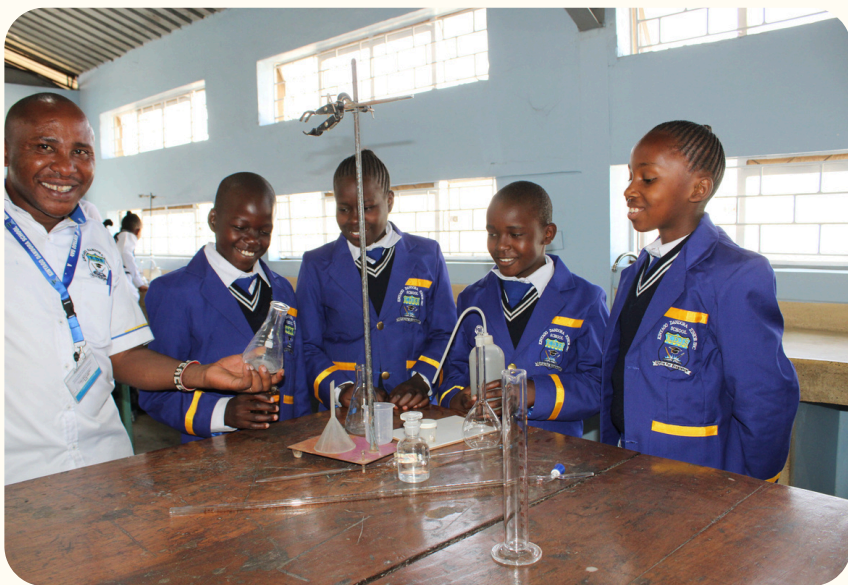

We desire for the impact of our partners and supporters to be permanently reflected in this institution. As we build this new center of excellence, we are prayerfully offering naming opportunities to those who help make this vision a reality.

IV. The Impact of an Investment

When this building opens, hundreds of children will walk through its doors carrying dreams that once felt impossible. They will study, grow, and prepare for lives far beyond the limits of the slum they were born into.

And because of the generosity of people like you, they will know something powerful—that someone thousands of miles away believed their future was worth investing in.
